Summary

Application developer with production experience building **scalable web applications** and **REST APIs** handling **200+ concurrent users**. Shipped client-facing features at a startup, integrated **third-party services** and **AI APIs**, and led a university technical team through code reviews and Git-based collaborative delivery. Writes clean, reusable code using **AI-assisted development** workflows (GitHub Copilot). Strong foundation in **JavaScript, Python, SQL, OOP, React, and Node.js**.

Education

Jain University, Bengaluru

Bachelor of Technology – Cloud Technology and Mobile Application; CGPA: 8.9/10.0

Bengaluru, Karnataka

2023 – 2027

Technical Skills

Languages: JavaScript (ES6+), Python, SQL, HTML5, CSS3

Core CS: Object-Oriented Programming (OOP), Data Structures & Algorithms, DBMS

Backend & APIs: Node.js, Express.js, Python (FastAPI), REST APIs, third-party API integration, JWT Authentication

Frontend: React.js, Next.js, Tailwind CSS, Three.js, GSAP

Databases & Cloud: MongoDB Atlas, AWS S3, Cloudinary, Vercel

AI: AI API Integration (Groq), GitHub Copilot, AI-assisted development

Tools & DevOps: Git, GitHub, CI/CD (GitHub Actions), Postman, Vite

Experience

NexaThread

Web Developer (promoted from Intern)

Bengaluru, India

Jan 2025 – Jan 2026

- Built and shipped client-facing features in **React.js** and **Node.js**, designed **RESTful API** endpoints, and built clean, reusable UI components in collaboration with designers and senior developers.
- Integrated **third-party services** (**AWS S3**, **Cloudinary**) for media storage and delivery, handling image upload pipelines and cloud storage integration.
- Took full ownership of a product module from scoping through debugging, testing, and release in **Agile sprint cycles**; promoted within **8 months** based on consistent independent delivery.

NexaThread

Software Engineering Intern

Bengaluru, India

May 2024 – Jan 2025

- Built a full-stack **MERN** admin portal for tracking intern performance, owning **MongoDB** schema design and **REST API** development end-to-end.
- Developed **Chart.js** analytics dashboards and a **React** frontend with **role-based access control**, applying **OOP** design principles across shared service modules.

The Cloud Club (Student Tech Club), Jain University

Technical Lead

Bengaluru, India

Feb 2025 – Mar 2026

- Ran workshops on **Git & GitHub** collaborative workflows, **JavaScript frameworks**, and development best practices for 15+ members, and reviewed PRs across all club projects.
- Architected and shipped CTF and CodeMania 2K25, two real-time event platforms with live scoring and leaderboard systems.
- Mentored junior developers through feature scoping, **code reviews**, and debugging sessions.

Projects

CTF Platform: Capture the Flag | *Node.js, Express.js, MongoDB Atlas, REST API*

[GitHub](#)

- Designed and built the entire backend for a college-wide CTF event, supporting **200+ simultaneous users** throughout the live competition.
- Implemented secure **flag submission validation**, real-time score computation, and live leaderboard APIs on a **MongoDB** schema optimized for concurrent read-write load.

NewsX: 3D Global News Explorer | *Next.js 16, JavaScript, Three.js, Tailwind CSS, Vitest*

[GitHub](#) | [Live Demo](#)

- Built an interactive **3D globe** (react-globe.gl + Three.js) with country-precise news via **NewsData.io** and an **RSS fallback** (BBC, Al Jazeera, DW, France24), plus a built-in reader that fetches and extracts the **full article text** server-side instead of a short snippet.
- Added one-tap **Groq AI** translation and native **Web Speech API** text-to-speech with sentence-chunking; covered core logic with **Vitest** and deployed on **Vercel**.

VitalTwin: AI Health Analytics Platform | *Next.js, Python FastAPI, scikit-learn, Groq AI, Three.js*

[GitHub](#) | [Live Demo](#)

- Built a **Python FastAPI** backend with a multi-stage **ML pipeline** covering biological age estimation, organ health scoring, and 10-year risk projections.
- Integrated **LLM streaming** (Groq) for real-time health chat and used **Three.js** for interactive 3D body visualizations mapping organ scores to a human model.

Personal Portfolio with AI Content Pipeline | *React 19, Node.js, Express.js, MongoDB, Groq AI, JWT, GSAP*

[GitHub](#) | [Live Demo](#)

- Node.js/Express** backend with **JWT** auth, an admin CRUD dashboard, and an **LLM pipeline** (Groq) that reads GitHub repo data and auto-generates project descriptions.
- Frontend built with **React 19** and **GSAP** with Lenis for scroll animations, lightweight privacy-focused usage analytics and no third-party tracking.
